

It's Energy Efficient

What makes Duro-Last Cool Zone the “**World’s Coolest Roof**”?

The superior, long-lasting reflectivity of a Duro-Last Cool Zone roofing system starts with a proprietary thermoplastic PVC film. The formulation produces a membrane that is white through and through, providing the longest lasting high reflectivity of any single-ply membrane.

In fact, Duro-Last Cool Zone roofing system loses only 1% of reflectivity after three years of weathering based on the Energy Star Roof Products Programs testing procedures.

This high, sustained reflectivity is saving significant energy and money for building owners all over the U.S.
